New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgB receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or autoimmune diseases.

Claim 64; Fig 2; 116pp; English.

The present invention relates to a fusion molecule comprising a first polypeptide sequence capable of specific binding to a native IgG inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory metif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FeepsilonR). Also provided are nucleotide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated

```
transgenic plant.

Isolating a nucleotide which encodes the zcytor 10 cytokine receptor enables the production of recombinant cells expressing the receptor.

Those cells can then be used to detect the presence of a modulator of zoytor10 protein by culturing the cells in the presence of a test ligand and comparing levels of activity of mouse zcytor10 in the presence and absence of the test sample. Similarly, detection of zcytor10 receptor ligand within a test sample can be achieved. The method comprising contacting a test sample containing an amino acid sequence from Cysls or Gly25 to Pro230 of the zcytor 10 cytokine receptor and detecting the binding of the polypeptide to a ligand in the sample. Specified peptide fragments of the zcytor 10 cytokine receptor and the methods described are used to identify ligands that stimulate the proliferation and/or are used to identify ligands that stimulate the proliferation and/or fragments of the cytokine receptor are useful for treating lymphoid. Immune, inflammatory, splenic, blood or bone disorders and for generating and control of an active against the receptor. A vector expressing a secreted numban zcytor 10 heterodimer is constructed. In this construct the extracellular cytokine binding domain of zcytor 10 is fused to the heteromeric contain of Igg amma and the extracellular portion of the the heteromeric contain of Igg amma and the extracellular portion of the the heteromeric contain of an inteleukin receptor subunit) is fused to human kappa light chain (See GRNESEQ record AAA54474). The two sequences are fused together using two primers (AAA54475), AAA54474).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

Immunoadhesin for treating human rhinovirus infection comprises chimeric intercellular adhesion molecule-1, and optionally a J chain and secretory component in association.

Disclosure; Fig 7; 138pp; English.

The invention relates to an immunoadhesin comprising: (a) a chimeric intercellular adhesion molecule (ICAM)-1 comprising a rhinovirus receptor protein linked to at least a portion of an immunoglobulin heavy chain, and (b) optionally a chain and secretory component associated with the chimeric ICAM-1 molecule. The immunoadhesin has plant-specific glycosylation and virucide activity. The immunoadhesin is useful for reducing infection by human rhinovirus (HRW) and hence the initiation or spread of the common cold by HRV. The immunoadhesin binds to HRV and reduces its infectivity, competing with cell surface ICAM-1 for binding sites, interfering with virus entry or uncoating and directing premature immunoadhesin in plants would be tetrameric, rather than dimeric. Immunoadhesin having multiple binding sites have a higher effective affinity for the virus, thereby increasing the effectiveness of the immunoadhesin. Association of secretory component and immunoglobulin J chain increases the stability of the immunoadhesin in the mucosal environment. Production is significantly less expensive in plants than in animal cell culture and production in plants is safet for human use, since plants are not known to harbor any animal viruses. The present sequence is that of a human immunoglobulin protein sequence, useful to

Treating or preventing T cell or Th2 cell mediated condition e.g., asthma or multiple sclerosis in mammal, comprises administering composition comprising death domain containing receptor, DR6 agonist or antagonist.

Disclosure; Page 132-133; 133pp; English.

The invention relates to a method for treating or preventing a T cell mediated condition or a Th2 cell mediated condition in a mammal. The method comprising administering to the mammal a pharmaceutical composition comprising adeath domain containing receptor (DRG) agonist composition comprising a death domain containing receptor (DRG) agonist cor artagonist. The method is useful for treating or preventing a T cell mediated condition in a mammal. A DRG cagonist is useful in the manufacture of a medicament for treating or preventing at least one symptom associated with aberrant apoptosis, graft or preventing at least one symptom associated with aberrant apoptosis, graft of preventing at least one symptom associated with aberrant apoptosis, graft of preventing at least one symptom associated with aberrant apoptosis, inflammatory bowel disease, vasculitis, postiasis, pancreatitis, insulingender disease, utonimmune dermatosis, utofomatosus, autoimmune dermatosis, autoimmune gastritis, fibrosing lung cryptometors, autoimmune destricts, symptomic (TTP), chromic glomerulonephritis, heemolytic thrombocytopenic purpura (TTP), chromic glomerulonephritis, heemolytic thrombocytopenic purpura (TTP), chromic glomerulonephritis, heemolytic thrombocytopenic purpura (TTP), chromic glomerulonephritis, heemolytic chrombocytopenic purpura (TTP), chromic glomerulonephritis, heemolytic or a condition or symptom related to the above mentioned diseases in a mammal. An DRG antagonist is useful in the manufacture of a medicament of a medicament confined dispublications of infection, human immunodeficiency virus (HIV), HIV-induced lymphoma, HIV-induced acquired intentioned diseases in a infection, complications of infection, human immunodeficiency virus (HIV), HIV-induced lymphoma, HIV-induced acquired intentioned diseases in a casociated ulceration, cytoprotection during cancer treatment, a syndrome (ADDS), fullminant viral hepatitis, chronic cirrhosis, HIV-induced sequired sequired in the medicament of a utoimmune hepatitis, chronic hep

The present invention describes an isolated human zcytor19 protein (I), and truncated zcytor19 proteins. (I) has immunosuppressive, cytostatic, antirheritic, neuroprotective, antirhlammatory, antirhermatic, antiarthritic, neuroprotective, antirhlammatory, contidabetic, nephrotropic, dermatological, anti-HIV and haemostatic activities, and can be used in vaccines. (I) or an antibody binding (I) can be used for suppressing the immune system for reducing rejection of tissue or organ transplants and grafts and for treating T-cell specific leukaemias or lymphomas and autoimmune diseases including rheumatorid arthritis, multiple sclerosis, diabetes mellitus, inflammatory bowel disease and Crohn's disease. The antibodies can also be used for treating immunologic real diseases, glomerulonephritis, mesangioproliferative disease, chronic lymphocytic leukaemia, secondary glomerulonephritis or vasculitis associated with lupus, polyarterliss, scloroderma, HIV-related diseases, amyloidosis and haemolytic uraemic syndrome. (I) and the antibodies can also be used for renal or urological neoplasms and multiple myelomas, aathma, bronchitis, emphysema and other chronic airway chain protein, which is used in an example from the present in inversion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a cytokine receptor designated zcytor17. Zcytor17 has immunomodulatory, antiinflammatory, antiviral, cytostatic, antianthritic and muscular activities. The zcytor17 proteins are useful for treating and diagnosing lymphoid, immune, inflammatory, spleenic, blood or bone discrders. Agonists or anti-zcytor17 antibodies are useful in stimulating cell-andiated immunity and for stimulating lymphocyte proliferation, such as in the treatment of infections involving immunosuppression, including certain viral infections. They are also useful for inducting cytoxicity and for treating leukopenias. Antagonist of zcytor17 polypeptides are useful for treating autoimmune diseases (e.g. rheumatoid arthritis and multiple sclerosis), inflammatory diseases (e.g. Crohn's disease), cancer, pancreatings, and inflammatory bowel disease. Zcytor17 was mapped to chromosoma 5, specifically to the 5d11 chromosomal region. ABA93767 to chromosome 5, specifically to the 5d11 chromosomal region. ABA93767 to chromosome 5, specifically to the 5d11 chromosomal region. ABA93767 to chromosome 6, specifically to the 5d11 chromosomal region. ABA93767 to chromosome 6, specifically to the perseent sequences used in the

The invention relates to a novel fusion protein comprising an IgE Prepsilon fragment and an IgG Fogamma fragment, which binds to an Prepsilon and an Fogamma fragment. FrogammaRIIB receptor. The fusion protein of the invention may have a use in protein therapy. The fusion protein is useful in treating or preventing IgE-mediated allergies and asthma, such as allergic asthma, allergic thinlitis, hay fever, food allergy, atopic dermatitis and drug allergy. The allergic response is particularly caused by peanut allergen. The present sequence represents

                                                                                                                                                                                                                                                                                                                                      fusion protein which involves identifying a candidate T-cell epitope within a junction spanning a fusion junction of a fusion protein, and changing an amino acid within the junction region to reduce the ability of the candidate T-cell epitope to interact with a T-cell receptor. The method is useful for reducing the immunogenicity of a fusion protein. It is useful for analysing, changing or modifying one or more amino acids in the junction region or protein to identify a T-cell epitope and reduce its ability to interact with a T-cell receptor. The less immunogenic fusion proteins are useful in providing threapeutic treatment. The present sequence is human immunoglobulin G1 (1991) heavy chain Fc region used to illustrate the method of the invention

The method involves identifying a candidate T-cell epitope within a junction region spanning a fusion junction of a fusion protein and changing an amino acid within the junction region to reduce the ability of the candidate T-cell epitope to interact with a T-cell receptor. The method is useful for reducing the immunogenicity of fusion proteins for use in therapy. The present sequence is human immunoglobulin G1 (1961) heavy chain Fc region. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                  240

Treating or preventing a B cell mediated condition e.g., chronic hepatitis or chronic cirrhosis, in a mammal by administering a pharmaceutical composition comprising a DR6 agonist or DR6 antagonist to the mammal. WPI; 2003-541604/51.

Disclosure; Page 96-97; 97pp; English.

The present invention describes a method (M1) for treating or preventing a B cell mediated condition in a mammal by administering a pharmaceutical composition comprising a DR6 agonist or DR6 antegonist to the mammal. Also described: (1) inhibiting B cell mediated immunity in a mammal, by

continistering a pharmaceturical composition of a medicament for canninistering a pharmaceturical composition of creating or preventing at least one symptom associated with conditions (Creating or preventing at least one symptom associated with conditions (Creating or preventing at least one symptom associated with conditions (CC treating or preventing at least one symptom associated with conditions (CC treating or preventing at least one symptom cannonial papersensitivity prewing a creation of the condition of transplant rejection, systemic lupus erythematosus, Behcet's disease, autoimmune nephropathy, autoimmune infertility, autoimmune pastricis, dispensional propersensitivity pneumonitis, autoimmune dermatosis, autoimmune hepatitis chonic circumine cardiopathy, autoimmune infertility, autoimmune pastricis, chronic circumine cardiopathy, autoimmune hepatitis, chronic fartility, autoimmune pastricis, chronic hepatitis, chronic circumine cardiopathy, autoimmune hepatitis, chronic hepatitis, chronic circumine the pastricis of the pastricis, chronic circumine cardiopathy, cautoimmune hepatitis, chronic hepatitis, chronic circumic consistence of autoimmune hepatitis, chronic hepatitis, chronic circumic consistence of antagonatism, chronic glomerulomephiticis, chronic hepatitis, chronic circumic consistence of antagonatism chromic circumic consistence of antagonatism chromic circumic consistence of antagonist in the manufacture of a medicament for tracting or preventing at least one symptom associated with conditions (C2) such as aberrant approach in from the hepatitis, dronic hepatitis, chronic cardiopathy, and conditions, in a mammal. DR6 has immunosuppressive, antipheratory conditions, in a mammal. DR6 has immunosuppressive, antipheratory conditions, or symptom related to the conditions, in a mammal. DR6 has immunosuppressive, antipheratory antipheratory conditions, antipheratory antipheratory conditions, antipheratory antipheratory conditions and present cardinabetic, cycocatic, munopersity, antipheratory condi administering a pharmaceutical composition comprising at least one DR6 8489999999999999999999999999999999999

SCF is also known as mast cell growth factor, steel factor or c-kit ligand. Antibodies of the invention are useful for preparing compositions for treating athme. They are also used in gene therapy. The present sequence is human SCF antibody heavy chain constant region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

The invention relates to a specific binding agent, which comprises at least one peptide selected from any of 62 peptides (ABR55769-830) or its fragment. The binding agents are antibodies that recognize and bind to angiopoietin-2 (Ang-2). The specific binding agent, particularly the antibody, is useful for inhibiting undesired angiogenesis, treating a cancers, inhibiting undesired angiogenesis, modulating to rinhibiting accidents, inhibiting undesired angiogenesis, modulating or inhibiting hapterating a crivity, modulating vascular permeability or plasma leakage, or treating a disease (e.g. ocular neovascular disease, obesity, haemangioblastoma, hemangioma, arteriosclerosis, inflammatory disease, inflammatory disease, inflammatory disease, atherosclerosis, endometriosis, neoplastic disease, bone-related disease, or psoriasis) in a mammal. The present sequence represents a human IgG1 constant region of an anti-Ang-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
